### Discussion

Two shallow areas require remediation for arsenic in IHSS Group 700-6. As per the ER RSOP Notification, these will be remediated in an area 3 feet square and 6" deep. Confirmation samples will be collected from the bottom and sidewalls of the excavation and analyzed for metals. The onsite lab cannot effectively analyze for arsenic and the turnaround time for offsite metals results is approximately 2 weeks. Therefore, the excavation boundaries will be surveyed and the excavation backfilled. The area will then be immediately available as a staging area for the IHSS 118.1/B730 project.

If additional remediation is required based on the sample results, then the area will be re-excavated.
